

VOLTZ™

Now, EV charging
wherever you
need it

The only self-contained EV charger that can go anywhere, economically, to keep electric vehicles on the road wherever and whenever you are off the grid.

Need to charge on the go?

Anywhere you are off the grid

Clean, Self-Contained, Continuous Power

Clean

Voltz is the mobile power station that runs clean, on propane, and keeps EVs moving. So, you stay green while safely and efficiently charging EVs at remote locations. No towing, no hauling heavy battery packs around. It's fast and efficient.

Self-Contained

Voltz is mobile, self-contained power so it can operate anywhere and never gives up. Two people can load Voltz to go - it has wheels and handles to make moving easy. And, unlike battery packs, Voltz never needs to get back to the grid to charge.

Continuous Power

Voltz can run up to four hours on one normal-20 lbs. propane tank and output 150+ miles of charge. Two tanks could provide a whole day of charging at an event or test track. And, the extra-long 25 ft. cord makes it easy to reach anywhere.

Specifications

Output	48A and 11.5kW
Input	Dual-fuel – propane or gasoline
Run time	Up to 4 hr. run time per tank, propane or gasoline
Portability	Under 215 lbs., 10" wheels, foldable pull handles
